The offer of IONOS SE for the products of the IONOS Cloud is exclusively addressed to traders, not to consumers. Prices are net prices and do not include any incurred statutory VAT (value added tax), WHT (withholding tax) or any other duties, that may be applicable.

PG = pricing group; 1 TB (Terabyte) is 1.024 GB (Gigabyte); 1 GB (Gigabyte) is 1024 MB (Megabyte).

Tiered pricing is always applied to the entire traffic (cumulated from Cloud infrastructure and S3 Object Storage), and the total amount is listed in the invoice.

Local traffic is traffic exchanged within an IONOS Cloud data centre. This applies to traffic via private as well as public networks. Regional Traffic means Traffic between the IONOS Cloud data centres of a region (Germany: Frankfurt, Karlsruhe, Berlin or US: Las Vegas, Newark) via public networks.

Traffic between IONOS Cloud data centres in different regions is recorded as normal public traffic.

IONOS Cloud operates various S3 Object Storages at different locations. Here, too, the definitions of local, regional and public traffic apply for the recording of network costs. For example, the traffic between a VM and an S3 object storage within a data centre is recorded as local traffic. Traffic between a VM and an S3 Object Storage in the same region but a different data centre is considered regional traffic. Traffic from a VM to an S3 object storage in a data centre in another region is assessed as public traffic.

VMware Licenses			
Basic License	per GB vRAM *	£ 6.00	PG 1p
vSan License	per used GB Storage	£ 0.015	PG 1p

* The calculation is based on the higher of the following two values for each VM and then added up:

- the reserved RAM in GB
- 50 % of the allocated RAM in GB

Allocated RAM = The RAM configured for an instance.

Reserved RAM = Configured, guaranteed lower limit of physical RAM that the host reserves for a virtual machine, even if the RAM is allocated more than once.
