Sales in 2023

We stand beside our customers as a reliable partner in all branches of industry with our product and solution portfolio!

This has always been and continues to be our claim – it's anchored in our DNA.

**”Cut the elephant into small
slices”**

The Vision

**"THE SYSTEM AUTONOMOUSLY
RESPONDS AT THE RIGHT TIME WITH AN
IT ORDER AND POINTS OUT THE
COMPONENTS TO BE CHANGED /
REPAIRED?
THE SYSTEM ENSURES THAT ALL
REQUIRED RESOURCES ARE AVAILABLE
AT THE APPROPRIATE TIME."**

Holger Wilhelm Schlink
VP Real Estate International | WAGO

Look into the future

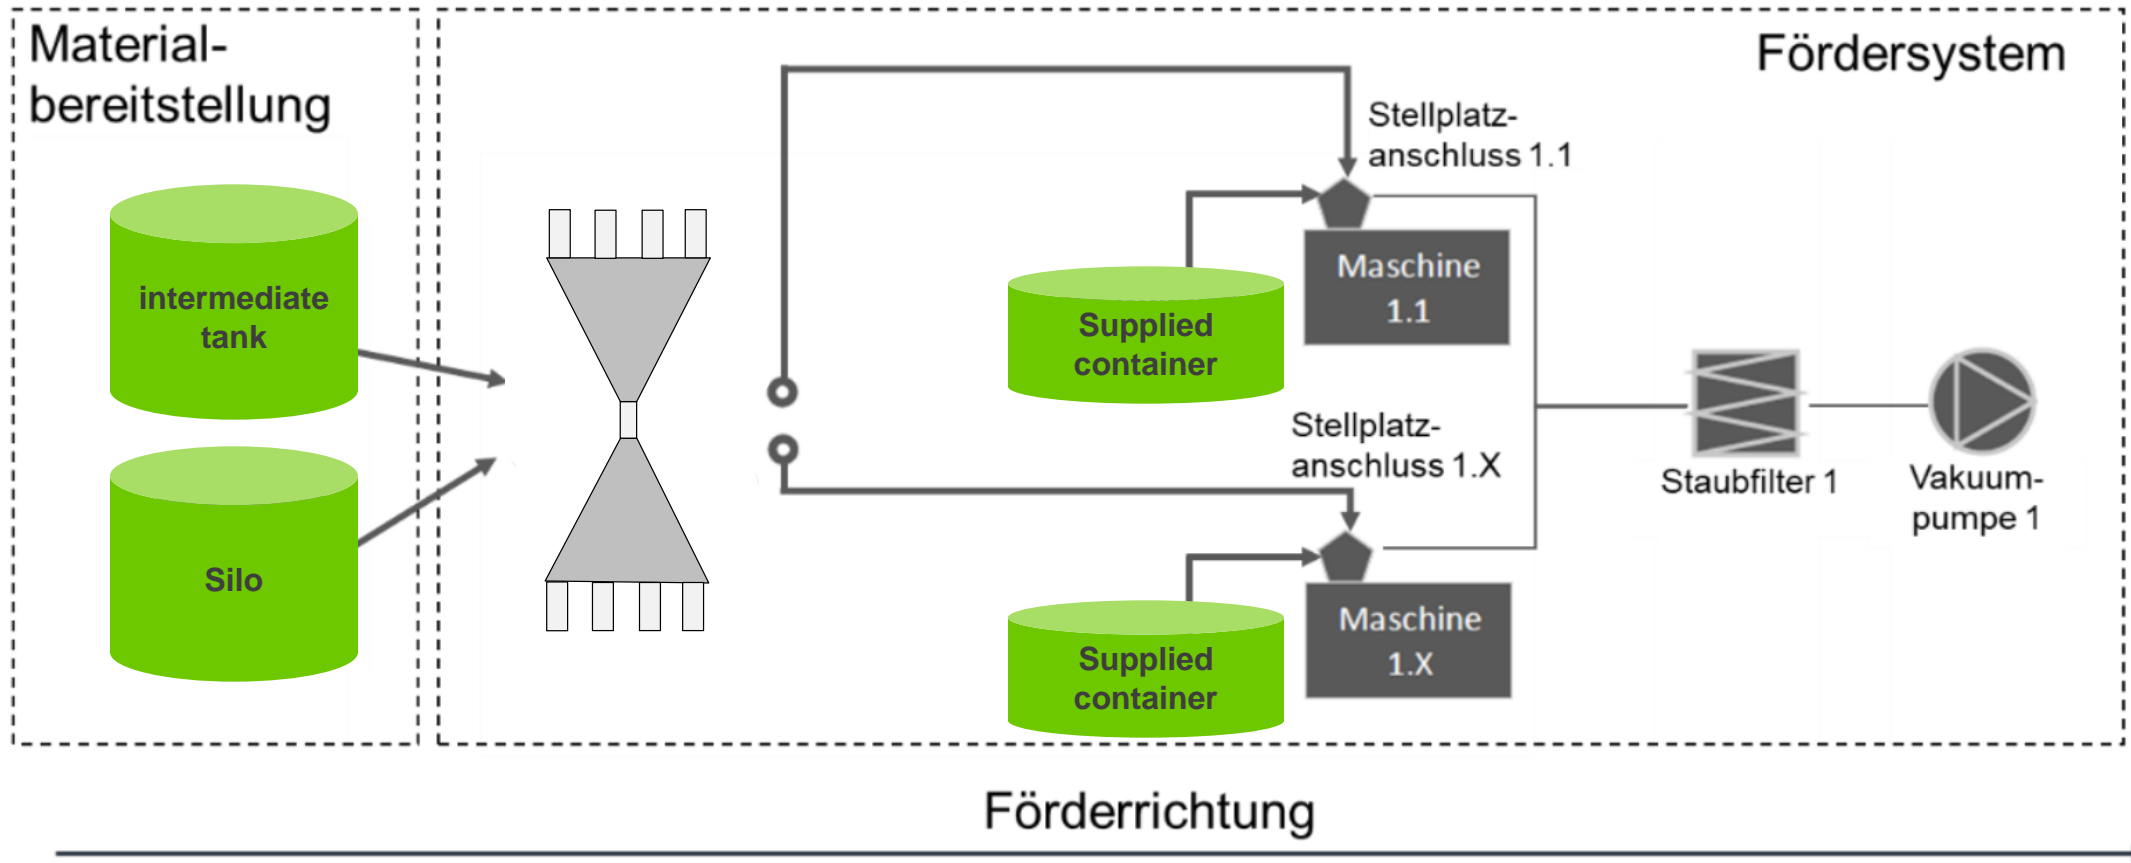

Filter monitoring in a material distribution system

With the help of a self-developed **predictive analytics system**, WAGO has significantly reduced the maintenance effort in production. It is also a pre error recognition and the optimization of process services to the system value services.

Automated Material Provision

Schematic Structure of a Material Distribution System

Initial Situation

- **Cyclic maintenance intervals** based on fixed time intervals generate an increased workload
- **Elaborate manual troubleshooting** of the process data using a spreadsheet program
- Rule-based **monitoring of measured values** with fixed limits in the IEC program failed

```
IF rThreshold > 10 THEN
    xError := FALSE;
ELSE
    xError := TRUE;
END_IF
```

Achieved Goals

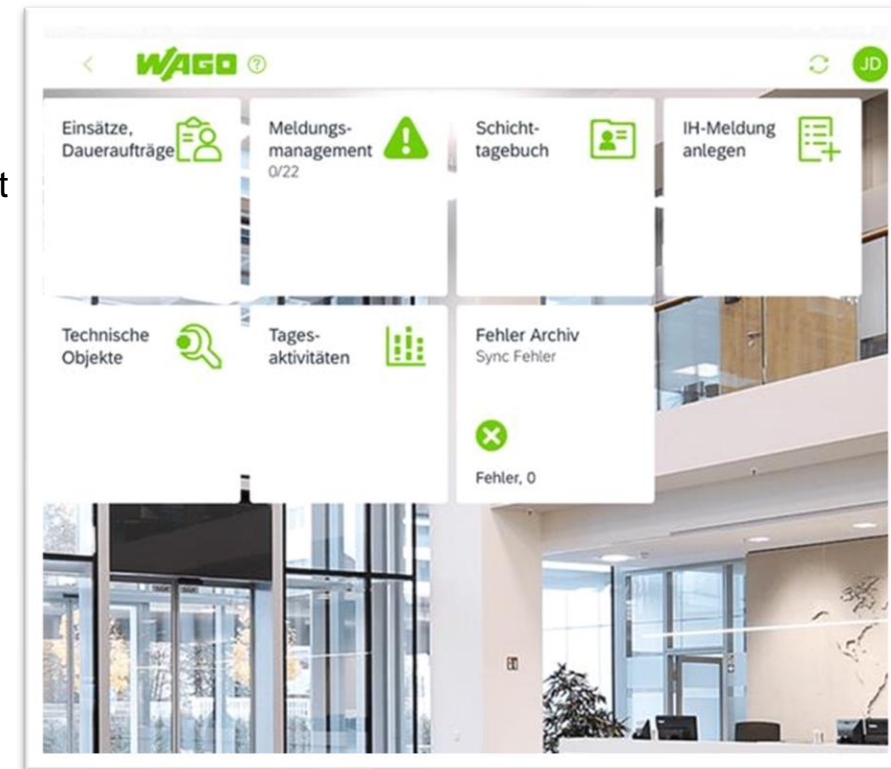

Predictive maintenance

- Adjusting the maintenance intervals
- Predictive Filter Cleaning Planning
- A powerful model for the pollution degree of the central filter - confirmed by our employees

Integration in den Betriebsprozess

- Integration of the CM system into SAP maintenance
- Closed-loop: Model-based generation of maintenance orders and subsequent acknowledgment of failures and activities

Implementation in Practice

Procedure

Data analysis and monitoring

- Continuous data acquisition and central storage of process data
- Automated process data visualization with a dashboard

Error detection / training

- Creation of new **machine learning models**
- Creation of **labels**
- Creation of new models for **fault detection**
- Test the created model on **historical data**

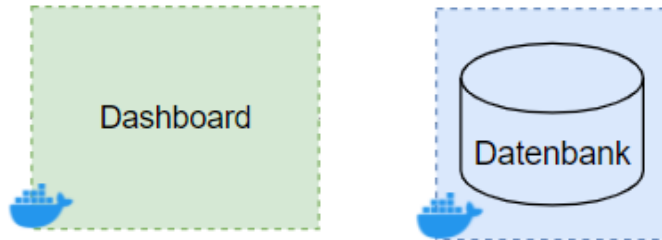

Error evaluation

- **Process feedback into the machine controller** to derive suitable measures (e.g., stop the system)
- Creation of **maintenance orders**

Procedure

Data analysis and monitoring

- Continuous data acquisition and central storage of process data
- Automated process data visualization with a dashboard

Error detection / training

- Creation of new **machine learning models**
- Creation of **labels**
- Creation of new models for **fault detection**
- Test the created model on **historical data**

Machine Learning
Algorithmus

Error evaluation

- **Process feedback into the machine controller** to derive suitable measures (e.g., stop the system)
- Creation of **maintenance orders**

Procedure

Data analysis and monitoring

- Continuous data acquisition and central storage of process data
- Automated process data visualization with a dashboard

Error detection / training

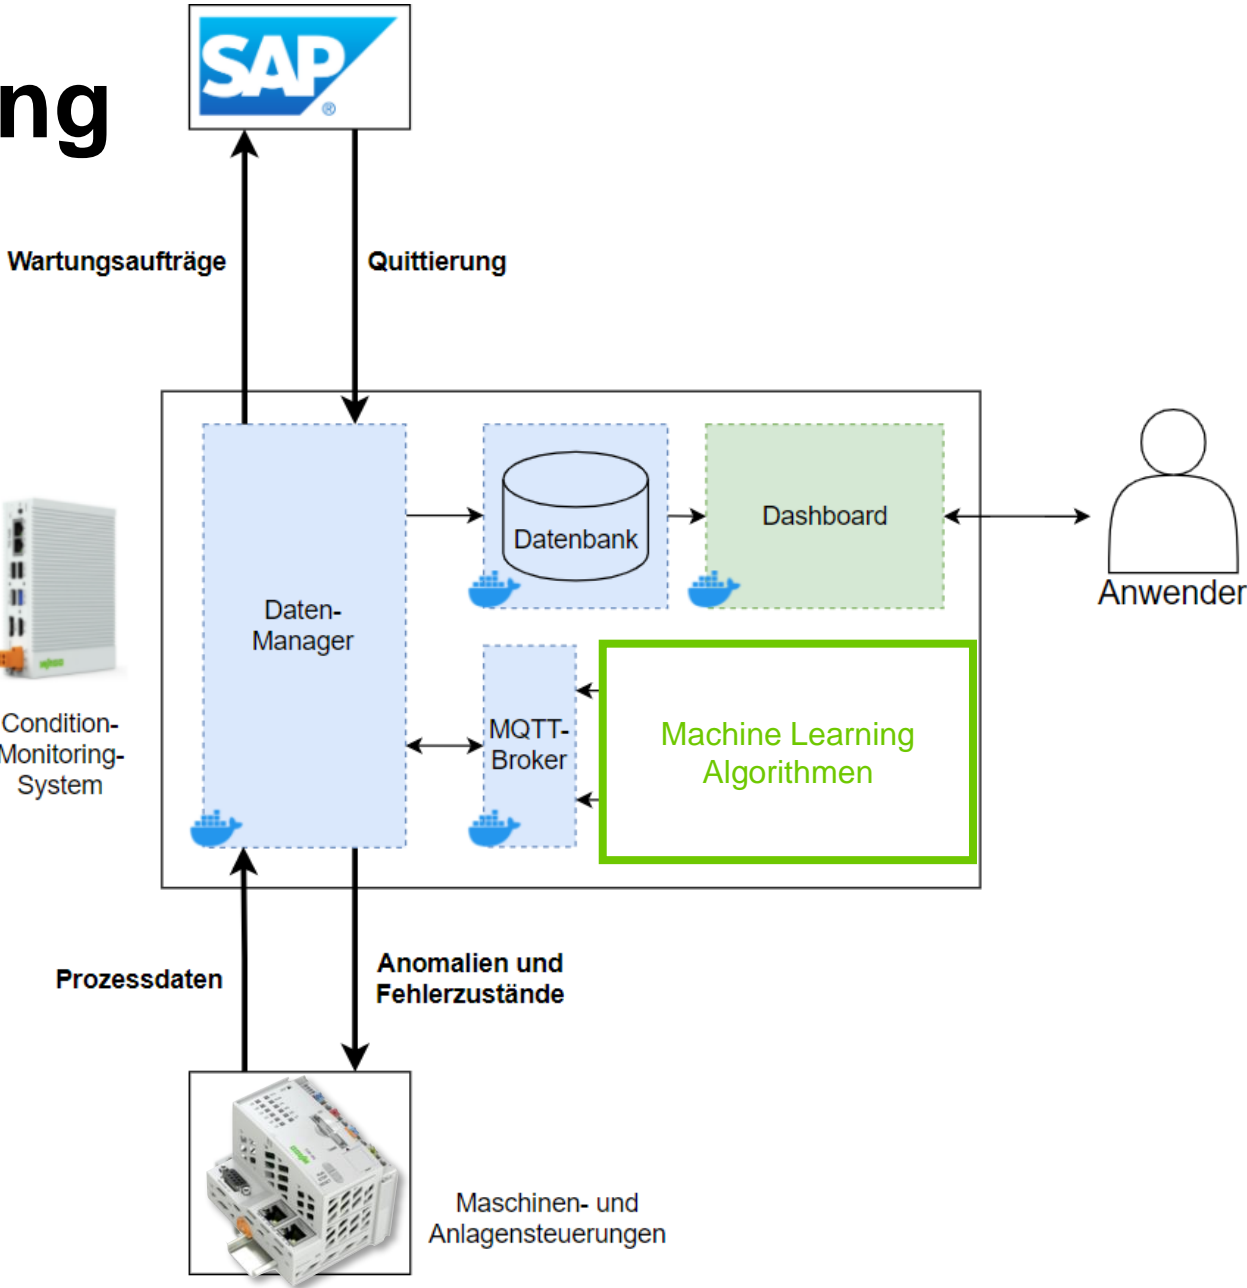

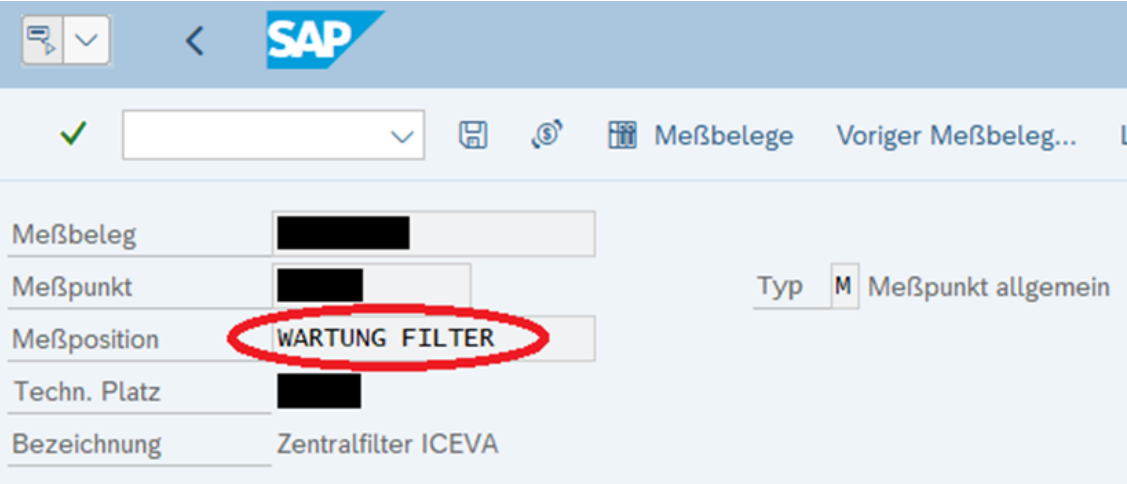

- Creation of new **machine learning models**
- Creation of **labels**
- Creation of new models for **fault detection**
- Test the created model on **historical data**

Error evaluation

- **Process feedback into the machine controller** to derive suitable measures (e.g., stop the system)
- Creation of **maintenance orders**

- Definition of meaningful parameters (here differential pressure)
- The **process expert** (Sebastian Pscheidt) defines critical values for autoregressive ML
- The **model predicts** the differential pressure → **predictive cleaning possible**

Integration into the ongoing operating process

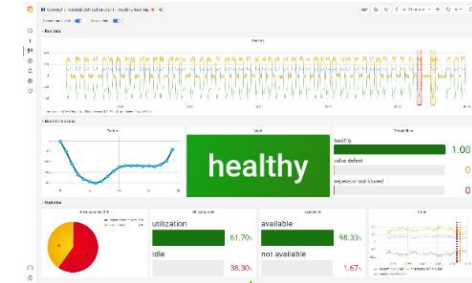

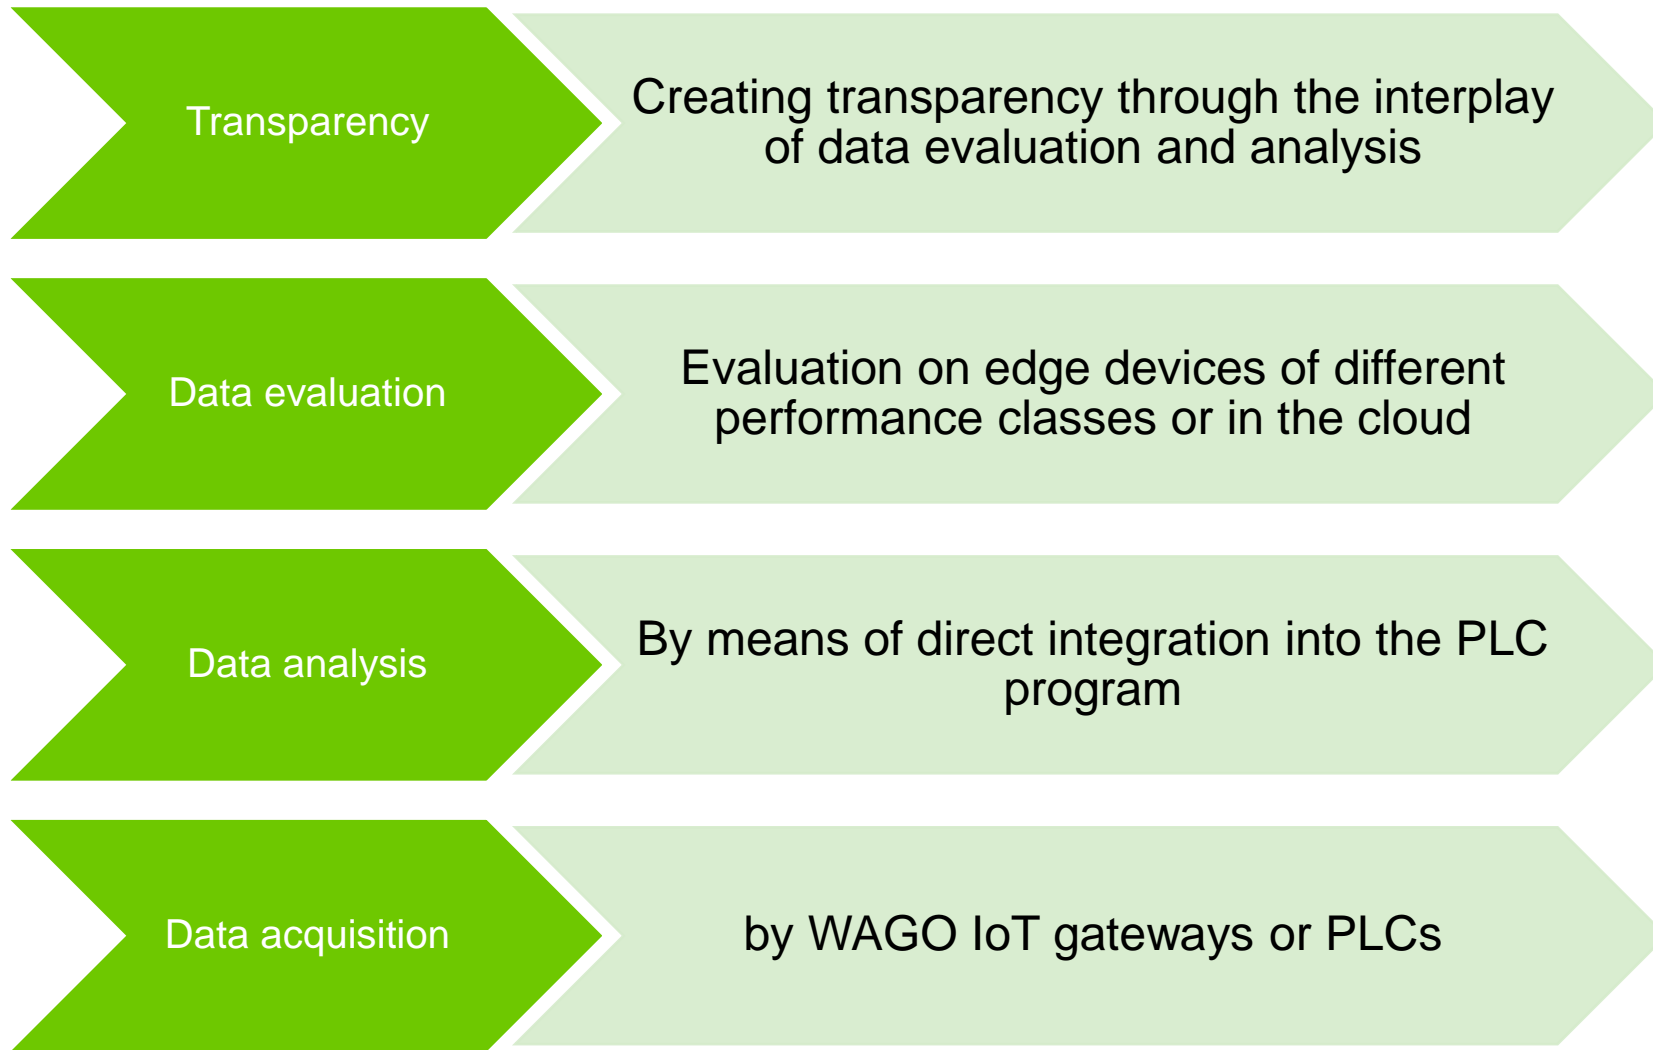

“With the analytics solutions and the dashboard, we have provided employees with a digital toolbox that simplifies their work significantly. They will gain a better understanding of cause-and-effect relationships of their actions.”

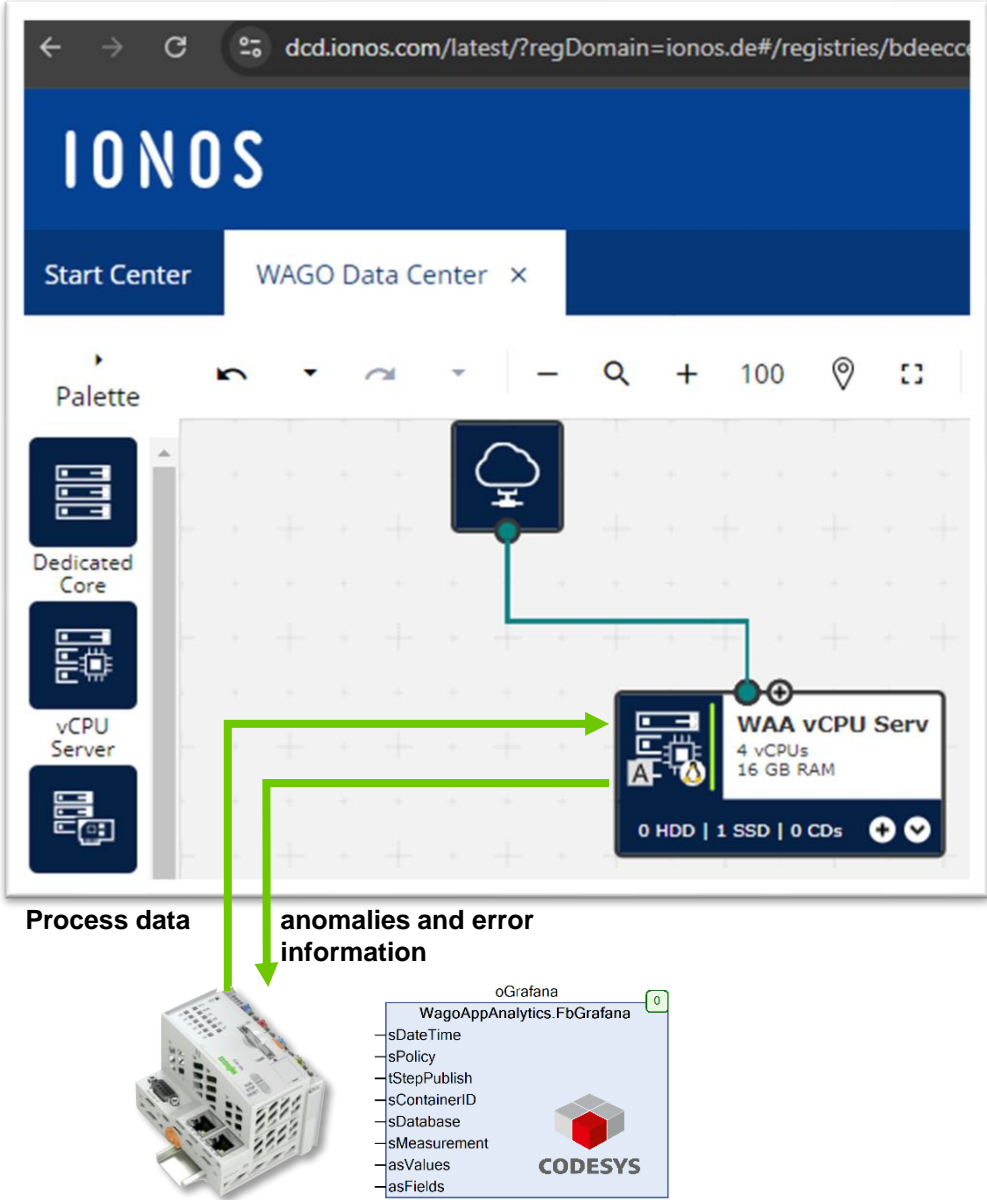

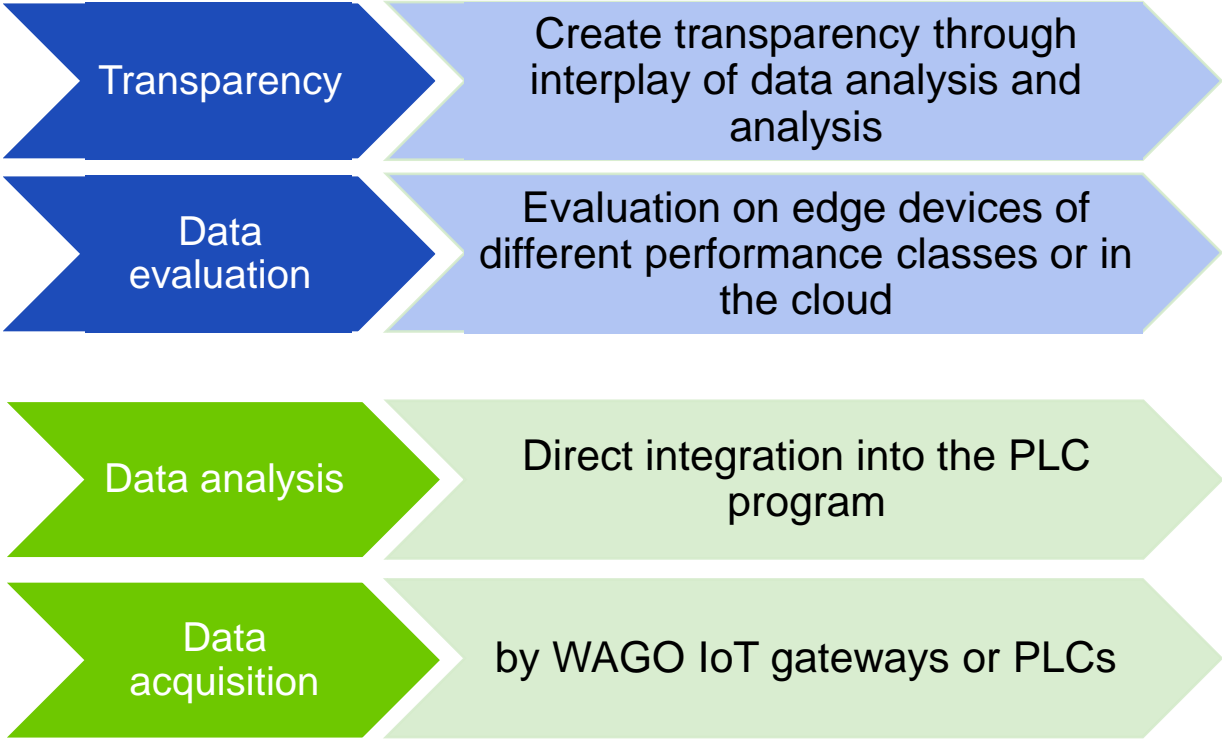

**Sebastian Pscheidt | Technical Engineer
Injection Molding Technology at WAGO**
